

## Columbia Marking Tools Slide-A-Mark hammer replacement

Step 1. Loosen front collar clamp screw, this allows for free rotation of the rod.

Step 2. Remove screw and guide rod from top of marker.

Step 3. Using a non marring mallet or dead blow hammer, strike the top of the rod collar (counter clockwise). Once loose, unscrew the collar, about 1 ½-2" of thread, this will allow the collar to be removed completely. Slide the current internal hammer out of the slide assembly and replace with second hammer.

Step 4. Reverse steps above to reassemble. Make sure front collar clamp screw is not too tight, this will cause marker to hang up when retracting.
